

CARE South Sudan is an International NGO working in South Sudan. CARE and its partners work with vulnerable communities to address the underlying causes of poverty and promote peace and development, through its strategic goal to reduce poverty by empowering women, enhancing access to resources and services and improving governance.

CARE South Sudan is looking for suitable South Sudanese candidates to fill the position of Anesthetic Assistant.

	150
Position:	Anesthetic Assistant
Department:	Health
Location:	Multiple
Reports to:	Medical Officer - In-Charge
Provides supervision to:	NONE

Purpose of the position:

The role of the Nurse Anesthetist is responsible for caring for patients before, during and immediately following surgical or medical procedure by administering appropriate anesthesia and monitoring the patient for reactions and complications; and to ensure patient comfort and manage pain all throughout and immediately after medical/surgery. They would use different types of anesthetic depending on the medical state of their patient including: local, regional and general. She/he will work closely with other healthcare professionals to provide the most appropriate and complete treatment plan for their patients. Since the Primary Health Care Centre (PHCC)+ their work is in a rural area with limited number of qualified medical practitioners, the Nurse Anesthetist will find that in most cases they will often be the sole providers of anesthesia to patients.

Major Responsibilities: (please define in output format – 1-10 things of what you expect to see as a <u>result</u> of this position)

 $\ensuremath{\mathsf{NB}}.$ These Adverts are pending funding and successful candidates shall only receive offers after successful approval of Funding.

To assess the patient's health before anesthetic is administered ensuring patient is in 'fit health' that allows for them to have anesthetic administered without complications. Including: Examining patient, obtaining medical history, and using diagnostic tests to determine risk during surgical, obstetrical, and other medical procedures Providing patient with information relating to anesthesia and explaining any risks or side effects from having anesthetic administered Ensuring that patients are emotionally and mentally prepared for surgery and helping in calming their fears Conferring with other medical professionals to determine type and method of anesthetic or sedation to render patient insensible to pain Carrying out physiological monitoring of patients notifying surgeon responsible for carrying out surgery of any abnormal changes in vital signs and/or physical appearance of the patient. Administering anesthetics to patients, observing and monitoring during surgery, and the period immediately following surgical/medical procedures. Manage anesthesiological services by coordinating them with other medical colleagues and activities and formulating plans and procedures; and staying alert to patient's physiological state all throughout the procedure and immediately after: Coordinating administration of anesthetics with surgeons during operation using local, intravenous, spinal, or caudal methods Preparing and administering anesthetics ensuring that the proper level of anesthetic is maintained throughout the surgery Positioning patient on operating table to maximize patient comfort and surgical accessibility and maintaining life support and airway management all throughout and immediately after the procedure Monitoring patient after anesthesia (this is making sure administering went as planned) and counteract adverse reactions or complications Once surgery is over, update patient's family members/attendants on patient's state and let them know when to expect the patient waking up and what could be the		Key Outputs/Responsibilities (Accountabilities and results)	Weig
